Should I add a solar energy system to my roof?

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy. While there's no one-size-fits-all solar solution, here are some resources that can help you figure out what's best for you. Consider these questions before you go solar. See the Spanish version [here](#).

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.

What is a small residential wind energy system?

Small residential wind energy systems can generate all or some of a home's electricity needs (if sufficient land area and average wind speeds are available) and can be integrated with solar and battery storage to provide emergency backup power.

Does SRP offer a residential solar price plan?

SRP offers flexible residential solar price plans so you can choose one that's right for you. SRP offers demand- and export-based plans for customers with existing rooftop solar systems or other energy-generating capabilities. Find the best fit for your lifestyle. Ideal for customers who produce some of their own energy.

How does solar energy affect your home?

Heating and cooling: If you use electricity to heat and cool your home, your heating and cooling needs will significantly affect the amount of solar energy you need. Weatherizing your home and heating and cooling efficiently will reduce the amount of electricity you need to produce with solar.

How do you segment solar generation potential?

Another way to segment solar generation potential is by roof size. Below is a chart comparing solar generation potential based on roof size, assuming all of the same metrics as before: 400-watt solar panels, 17.5 square foot panels, and using every inch of roof space available for solar.

Another way to segment solar generation potential is by roof size. Below is a chart comparing solar generation potential based on roof size, assuming all of the same metrics as before: 400-watt solar panels, 20-square ...
